

ABSTRACT

Amend the Abstract beginning at page 11, line 1, as follows:

~~In order to facilitate operation of a~~ A mobile telecommunications system ~~comprising~~ has a handset and a headset for connection to the handset; ~~the~~ The handset includes ~~an~~ an RF transceiver means for transmitting an outgoing call and receiving an incoming call, ~~and a processor means coupled to the RF transceiver means for providing~~ that provides audio signals on a first audio path to an audio transducer means in the handset and on a second audio path for an audio transducer means in the headset; ~~the~~ The headset and ~~the~~ handset include respective button switches arranged that the operation has the effect both of initiating and/or accepting a call, and of routing audio signals to the respective first or second audio paths. Embodiments are described including a separate switch for toggling the audio paths, and automatic sensors for detecting use of the headset or handset.
